PROFESSIONAL SUMMARY

Full-Stack Developer with a CAS in Web Application Development (HES-SO) and hands-on experience designing, building, and deploying production-grade web applications across Swiss business domains. Experienced in delivering end-to-end systems covering frontend, backend, databases, testing, and DevOps infrastructure. Seeking a first professional software engineering role or internship where I can contribute strong technical execution, adaptability, and a proven ability to independently deliver complete working systems.

FULL-STACK DEVELOPMENT EXPERIENCE (PROJECT-BASED)

Full-Stack Developer | Personal Engineering Portfolio | 2021 – Present

- Designed, built, and maintain more than 20 production-grade web applications grouped into six platform domains: real estate, retail, food delivery, healthcare, postal logistics, and ERP systems.
- Developed and deployed all applications end-to-end, including backend services (Node.js, Laravel, .NET, Spring Boot), frontend interfaces (React, Vue, Angular), and database systems.
- Operate swiftapp.ch as a live production environment: Traefik reverse proxy, Docker-based infrastructure, CI/CD pipelines (GitHub Actions), and Linux VPS administration.
- Implemented production-level features including RBAC systems, multilingual support (DE/FR/EN/IT), Swiss payment integrations, QR-bill (ISO 20022), and automated testing (unit → E2E).
- Applied consistent engineering practices: modular and microservice architecture, API design, version control, testing, and deployment workflows across all projects.

SELECTED PROJECT GROUPS · SWIFTAPP.CH

Enterprise ERP Platform | Dual Stack | *ASP.NET Core (.NET 10 / C#) · Spring Boot 3.5 (Java) · PostgreSQL · Keycloak · Blazor + Thymeleaf/HTMX*

- Enterprise ERP platform, specifically designed for Swiss watch making and retailing enterprise, implemented independently in both .NET and Java ecosystems with accounting, HR, inventory, CRM, production, and sales modules.
- Swiss business rules built in from the start: QR-bill invoicing (ISO 20022), Swiss VAT structure, and Keycloak OIDC identity management.

Canton Based Healthcare Network Platform | *Node.js · React · MongoDB + Redis · MUI v6 · Redux Toolkit*

- Multi-site healthcare platform inspired by the operational structure of the Réseau Hospitalier Neuchâtelois (RHNe), which integrates seven healthcare institutions across the Canton of Neuchâtel.
- Implemented appointment booking, physician directories, multilingual service listings, event calendars, job postings, and emergency contact information for a distributed healthcare network.

Swiss Postal Logistics Platform | Dual Stack | *ASP.NET Core (.NET 10 / C#) · Spring Boot 3.5 · Keycloak · Redis · PostgreSQL · Flyway*

- Parcel lifecycle management with delivery routing, branch operations, PTT address database integration, and notification workflows — same domain built in .NET and Java with consistent module boundaries and event-driven communication.

Swiss Real-Estate Platform | *Node.js + Laravel · React + Vue 3 + Angular · PostgreSQL + MongoDB · Meilisearch · Cloudinary*

- Multi-region real-estate discovery platform inspired by immobilier.ch, adapted for French-speaking cantons, Bern, and Zurich. Orchestrates multi-actor workflows (users, property owners, agencies, and admins) with multilingual listings, geospatial canton filtering, admins back-office tools, and full-text property search.
- Engineered with dual backends and triple frontends for full domain parity (Node.js/Express API + Laravel API with React admin panel) and React, Vue, and Angular frontends — all deployed on the same domain, showcasing cross-stack versatility and consistent Swiss-market compliance.

Swiss Food Delivery Marketplace | *Node.js + Laravel · React + Vue 3 + Angular · Socket.io · BullMQ · Redis*

- Multi-region food delivery platform modelled on just-eat.ch, adapted for French-speaking cantons, Bern, and Zurich. Orchestrates multi-actor workflows (customers, restaurants, couriers, admins) with real-time order tracking, async job queues (BullMQ), and role-based back-office interfaces — delivered through three separate frontend implementations (React, Vue 3, Angular) on the same domain.
- Dual backends (Node.js + Laravel) and a VILT admin panel; complete order lifecycle state machine with Swiss-oriented payment workflow simulations (TWINT, PostFinance), and Stripe.

Swiss E-Commerce Platform | *Node.js + Laravel · React + Vue 3 · MySQL + MongoDB · Meilisearch · Stripe*

- Multi-store retail ecosystem modeled after interdiscount.ch with product catalogues, inventory management, coupon engines, multilingual storefronts, and Swiss-oriented checkout workflows.
- Implemented modular backends, admin dashboards, RBAC, product search, and Stripe payment integration.

TECHNICAL SKILLS

Backend	Node.js / Express · Laravel (PHP) · ASP.NET Core (C#) · Spring Boot (Java)
Frontend	React · Vue 3 · Angular · Next.js · Blazor SSR · Thymeleaf · TypeScript · Tailwind CSS · MUI · Bootstrap · Figma
DBMS	PostgreSQL · MySQL · MongoDB · Redis · Meilisearch
Architecture	Modular Monolith · Clean Architecture · DDD · Repository + Service Layers · Event-Driven · Microservices
Auth & Security	JWT · OAuth2/OIDC · Keycloak · RBAC
Testing & Quality	Jest · Pest · Vitest · Playwright (E2E) · JUnit · xUnit · Testcontainers
DevOps	Docker · CI/CD GitHub Actions · Traefik · Nginx · Linux VPS admin
Payments	Stripe · PostFinance / TWINT (simulated workflows)

EDUCATION

2020 Neuchâtel · Switzerland	Certificate of Advanced Studies (CAS) — Web Application Development Haute École Spécialisée de Suisse Occidentale (HES-SO)
2007 Mekele · Ethiopia	Bachelor of Science — Civil Engineering University of Mekele

LANGUAGES

English	Fluent (professional proficiency)
French	Intermediate (B1)
Amharic	Native
